

I want to...

#39580/  
#39581

Shorten my  
flapper cycle

Lengthen my  
flapper cycle

so...

• Turn valve counter-  
clockwise

This will loosen/  
decompress the  
springed portion of  
valve and air will  
escape the teeny  
note more easily.

Your Flapper will close  
sooner!

Turn valve  
clockwise

This will tighten/  
compress the  
springed portion  
of the valve.  
and the air will  
take longer to escape  
the teeny note.

Your flapper will  
stay open longer.
